

TSG Connection reversing contactor circuit V2

The TSG Connection reversing contactor circuit V2 is a prewired and ready to plug in solution for a fast electrical connection of the Langer & Laumann door operator (TSG) to existing three-phase door motor. There is no need of wiring the door controller around.

The TSG Connection reversing contactor circuit V2 will be simply connected to the reversing protector circuit – instead of the old three-phase door motor.

Additional wiring to trigger the door command „open“ and „close“ is not necessary.

Full Kit

TSG Connection reversing contactor circuit V2

Your Advantages

- Prewired
- Easy
- Pluggable
- Fast
- 3 phase, 80 ... 500 [VAC]

Product-Number

8.20.81521
